

Fulfillment360™ — A Model for Success

From a project's beginning to its end, VARGO® simplifies warehouse and fulfillment operations to reduce customers' operating costs, and increase profitability, flexibility and processing speed.

VARGO®'s pull-based methodologies and its Continuous Order Fulfillment Enterprise (COFE®) solution make fulfillment a simple, low-risk venture.

Warehouse fulfillment shouldn't be complicated — with VARGO®, it's not.

DISCOVERY

VARGO®'s team visits a customer's site to gather information, understand the warehouse or fulfillment operation and identify needs, including hardware, equipment, software and controls necessary to meet a customer's needs.

QUALIFY

Our engineers design an initial concept that meets the client's objectives, product, budget, building constraints and volume.

SCOPE

VARGO® explores potential solutions and provides customer with an estimate of the most beneficial solution for their business.

DESIGN

We manage every aspect of the design and installation of a distribution center, including establishing project schedules and milestones.

FINALIZE

VARGO® provides final plans and pricing and implements its warehouse control software solutions to maximize speed and efficiency. VARGO® implements COFE®, an adaptable, customizable Warehouse Execution System that drives the process from end to end, breaking down the silos of systems and machines and optimizing workflow for efficiency or for expediency, depending on the need.

The Results We Achieve Are Unmatched in the Industry

COFE® WES (Warehouse Execution System)

VARGO®'s COFE® waveless picking operation is coupled with waveless sorting to individual orders, completing orders continuously and increasing both fulfillment flexibility and processing speed. COFE® does for fulfillment what Lean did for manufacturing.

Problem solved.

Warehouse fulfillment shouldn't be complicated.

PROVEN. SUCCESSFUL. SIMPLE.
